Caution: These findings vary up to 8%!

When conducting a study that involves a sample, researchers are cautious about how they interpret the results. This is because they can never be certain that the findings will represent the whole population from which the sample was drawn.

For this survey, the ‘whole population’ is represented by the total number of households found within each selected NRE site. When you are reading these results, please keep in mind that any of these findings could vary by 8%.

WHAT DID WE LEARN IN 2001?

This is the fifth year of the New Rural Economy Project (NRE). It is an exciting time, since we are now reaping the fruits of our collaboration and hard work. This document is a small part of the harvest.

You will find two major sections in this booklet.

Ray Bollman (StatCan), Tom Beckley (UNB) and Bill Reimer (NRE)

- The NRE Household Survey 2001. This first section presents a selection of results from our household survey conducted last summer. From May to July, we knocked on doors in 21 of our NRE sites and spoke to people in just under 2000 households. They gave generously of their time and expertise to inform us about their community activities, household organization, challenges, and options regarding a range of rural issues. We have selected a few of the results so you can compare your community to others in your region and across the nation.

- The NRE in the Global context. This section fills you in on NRE events across the nation and around the world. Through its parent organization, the *Canadian Rural Revitalization Foundation* (CRRF), we enjoy the support of many other national and international groups. They help us understand how local events and challenges can be rooted in more global processes such as the changing demand for our resources, the introduction of new technologies, or the implementation of policies affecting economic and social programs.

Our collaboration is long-term. After four years of working together, we are enjoying a level of exchange that is exceptional for both our research and education objectives. I was particularly pleased to meet representatives from 15 of the NRE sites who joined us at the CRRF Annual Conference in Muenster, Saskatchewan last October. For three days we compared experiences, visited local projects, and enjoyed each others' company as we searched for new ways to improve the lives of rural Canadians. We invite you to join us this fall at our next meeting in Miramichi, New Brunswick (October 26th to 29th).

This booklet is prepared as part of our continuing discussion about the condition and future of rural Canada. We ask you to read it – not as a finished document – but as a basis for discussion. Let us know whether it makes sense from your point of view – whether it helps you understand what is happening in your community or whether we have overlooked something important. Write us a letter, give us a phone call at (514) 848-2139, e-mail us with your comments (nre@vax2.concordia.ca), or leave them on our web site (<http://nre.concordia.ca>). We will visit your community whenever we can – keep an eye out for us.

Dr. Bill Reimer

IMPRESSIONS FROM THE NRE 2001 HOUSEHOLD SURVEY TEAM

This past summer the NRE surveyed about 2000 rural households across Canada from 20 sites. The community of Ferintosh has been a supportive partner in our research on changes in rural Canada since the inception of the project in 1997. Frank and Vera Jackson have joined us a number of times at our annual conferences and each time have shared their warmth, stories, pictures and ideas with researchers from around the world, Canadian policy-makers and other community members. The NRE appreciates the efforts of the residents of Ferintosh who made this past summer's research a delightful experience. We look forward to returning to your community very soon!

Anna Woodrow and Diane Martz
Field Site Coordinators

I arrived in Ferintosh, Alberta last summer, with a car full of surveys and head full of curiosity. What would I find in this small prairie community? Would the residents be annoyed or cheered by my constant knocks on various doors? My wondering was soon stilled when I was met with the warmth of my hosts, Frank and Vera Jackson, the hospitality of the residents and the charm and beauty of the small town. The name of the New Rural Economy program was not unfamiliar and many people I spoke to recalled earlier visits with project

leaders or at the least, notices of Ferintosh's participation in the NRE program. And without fail residents were eager to share their knowledge and hopes for their community. My ten days in Ferintosh were both pleasant and productive as a mediator between a fine community striving for revitalization and an organization ready and able to assist them on this path.

Theresa Negreiff, Interviewer

The response to the July 3-11 Household Survey (Site 26) was gratifying. The caller grid and script were very helpful in the preparation. From the 75 households (there are now 81) a total of 67 contacts were made to achieve the required goal of 52 completed surveys. Most everyone was co-operative with only 2 refusals. Theresa was a delightful person to have in our home and community. People seemed pleased to see her walking or bicycling throughout the village. We look forward to the report.

Community Inclusion and Cooperation

One of the things that we tried to measure using the survey was ‘Social Cohesion’. By social cohesion, we mean the extent to which people respond collectively to achieve the outcomes they desire, and to deal with the economic social political or environmental stresses that affect them. It is difficult to measure this, but one way is to find out how residents feel about the cohesion within their community. Another way is to measure how the community works together to provide basic needs and services. This is discussed in the section titled ‘Doing Things for Ourselves and Others’.

Respondents were asked how strongly they agreed or disagreed with statements such as: “I feel like I belong in this community”, “I believe my neighbours would help me in an emergency” and “I regularly stop and talk with people in my community”. The answers we received helped us to understand how the community viewed itself, and if they felt the community was able to work together to achieve success.

Perceived High Levels of Social Cohesion in the Community

In looking at the above bar chart we find that 15% of the respondents in Ferintosh feel that the community has a high level of perceived social cohesion compared to 46% for other NRE Western sites and 42% for the total Canadian sites.

Given that residents describe the level of community social cohesion as relatively low, it may be beneficial to organize more community-based events in order to increase the sense of fellowship. Neighbourhood activities that bring people together such as community festivals and celebrations can also potentially increase the community’s social and economic well being.

Perception of Leadership Opportunities for Women and Young Adults

Residents of Ferintosh view their community as being open to leadership opportunities for both women and young adults. In the graph above, 84% of the respondents say that the community has leadership opportunities for women and 62% of respondents say that the same is true for young adults. Ferintosh respondents report similar impressions of leadership opportunities for both women and young adults when compared to the other Western NRE sites and the total Canadian sample.

Perceived Ability of Community to Work Together

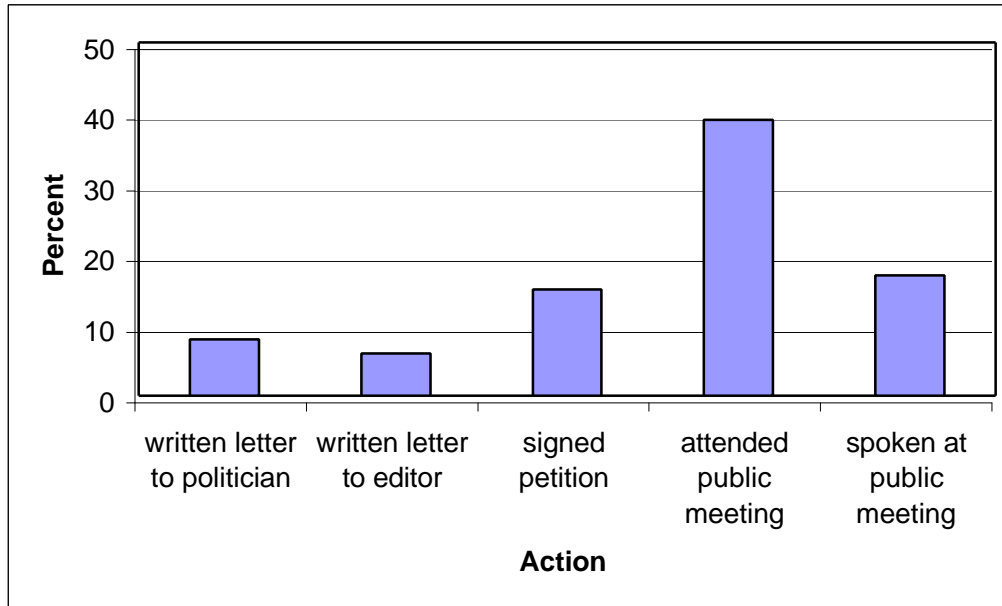

Residents of Ferintosh feel that community members are willing to work together towards a common goal. The table above shows that 88% agreed that the community was able to work together, the same as the average of respondents in the Western sites and higher than the average of the Canadian sites.

What this data suggests is that Ferintosh is a community that is able to work together and that the leadership opportunities for both women and young adults in the community can possibly contribute to the community's ongoing success.

Taking Action in the Community

As part of the summer survey, we were very interested in how people express their concerns about community issues. To measure this, we asked respondents if they had written a letter to their Mayor, Provincial or Federal government representative, or to a newspaper editor. We also asked if they had signed a petition, attended or spoken at a public meeting in the 12 months previous to the interview.

Action Taken in Ferintosh

The graph above shows that in Ferintosh, 8% of respondents wrote letters to the Mayor, Provincial or Federal representative and 6% wrote letters to a newspaper editor. Respondents in Ferintosh are more active in petition signing with 15% of respondents citing that they had signed a petition. In addition, 39% of respondents attended a public meeting and 17% had spoken at public meetings.

As can be seen in the graph below, the residents in Ferintosh are less likely to speak at public meetings than regional counterparts, and are less likely to sign petitions than either other regional or National communities interviewed.

In most communities, respondents were much more likely to attend and speak at meetings, or sign petitions than they were to write letters stating their opinion. Public meetings and petitions are excellent ways of sharing information, gathering public opinion, and reaching a consensus within a community. It is also important that other avenues are used to express opinion, especially those that inform external decision makers.

Action in Ferintosh compared to Western and Canadian Sites

Average number of organizations per person

In order to understand how a community works together, we measured how many voluntary organisations people within the community belonged to. These might be social clubs, religious groups, or any other type of organised meeting. We took an average per person of the number of groups attended, in order to make the comparison between communities shown in the graph above.

Small groups and communal activities, whether formal or informal, offer a value to the community. While the measure can never be perfect, the number of voluntary organisations that people belong to is a way of understanding the level of social cohesion in a community.

Services In The Community

The basic services that a community receives are key to the quality of life enjoyed by the members of that community. In order to understand them, we looked at the availability and use of basic services such as health care, education, safety and recreation. We asked people to rate if they considered the services to be good, and if they had improved or worsened in the last five years.

The residents of Ferintosh have not noticed major changes in access to health services in the past five years. As is seen in the graph below, 83% of respondents claimed their access to a doctor was the same five years ago while 6% said it has become easier. In the case of the dentist, 85% said access was the same and 4% said it has become more difficult. Although fewer respondents had experience with emergency services, most had not experienced any change. This suggests that Ferintosh has been able to maintain most of its essential health services during recent years.

Opinions About Health Service Access Compared to Five Years Ago

People in Ferintosh are, for the most part, also satisfied with the quality of their local services. The next graph shows the percentage of respondents that described different services as either “good” or “very good”. The respondents rated the elementary school, garbage collection and fire protection most highly. All these services got the support of nearly 80% of the community. The services that were not rated highly are the secondary school, recreation facilities and recreation programs. These services rated much lower than the corresponding service in the Western and Canadian sites. The secondary school for example only got 21% support in Ferintosh, versus 60% support in the Western sites and 56% support in the Canadian sites overall.

Respondents who Describe Services as “Good” or “Very Good”

Respondents were asked how these same services have changed over the past 5 years. As is shown in the graph below, most felt they have stayed the same. The greatest improvement was seen in the area of water supply; 72% of respondent felt water is better now than 5 years ago. The most reduction is in the case of the elementary school, with 23% of respondents describing a decline. Overall, our results indicate that service provision is relatively non-problematic in Ferintosh, with the exception of the secondary school and recreation facilities and services.

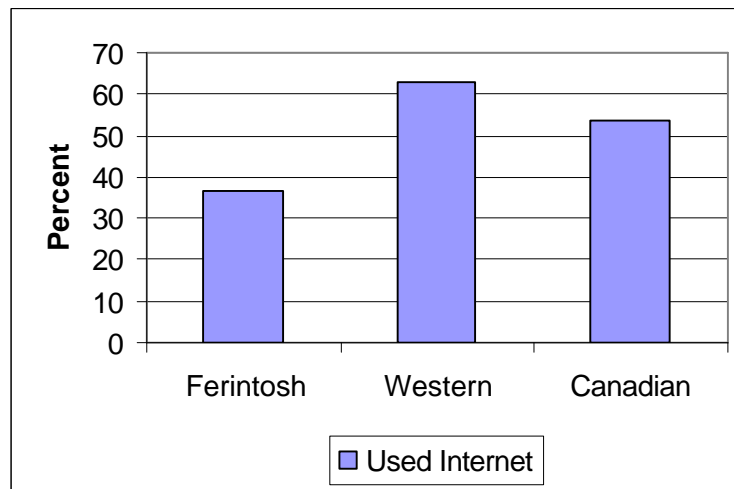

Perceptions of Local Service Quality as Compared to Five Years Ago

Internet in the Community

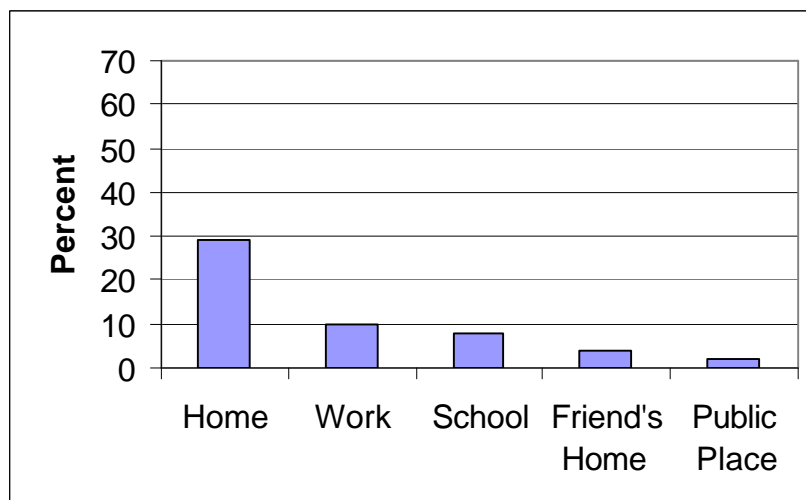

Part of this summer's survey looked at the community's use of the Internet. Questions we asked have helped us to better understand how many people in Ferintosh use the Internet, where it is used, what for, and opinions about it.

Internet Use in Ferintosh

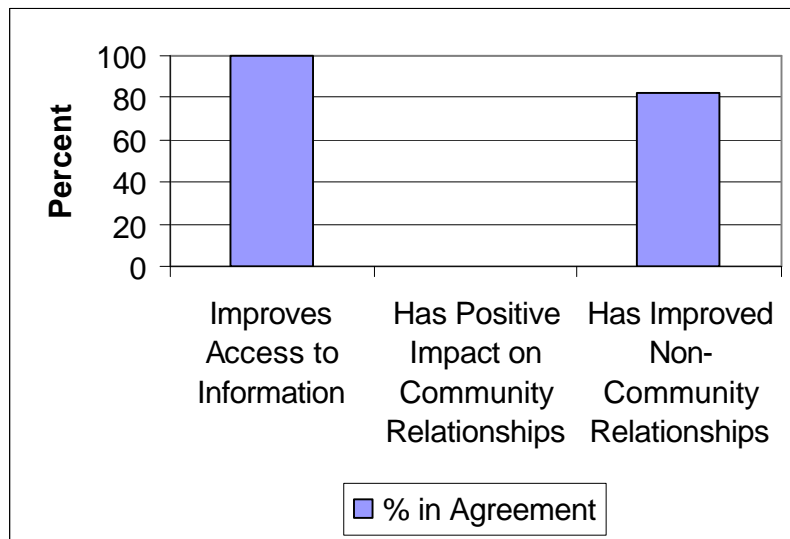

The above graph shows the percentage of people who use the Internet in Ferintosh, the Western sites, and in all 20 Canadian sites. Here we can see that approximately 37% of the people surveyed in Ferintosh use the Internet. This is less than both the regional and national averages. By adding computers and Internet access to other locations in Ferintosh and promoting existing public access locations, people who may not have access within the home may be encouraged to get online. Also, by holding "How To" sessions on Internet and computer use for various groups such as the seniors club or youth groups, more people may feel at ease using these technologies and build upon their existing knowledge.

Locations for Internet Use

The previous graph shows where people in Ferintosh tend to use the Internet. The most common place is at home and the least common place is in a public location such as a library or community centre. The top three locations being home, work and school suggest that the people of different ages and occupations can get online and access the information they need, although the low level of response indicates that access may not be as readily available as in other communities.

Opinions About the Internet

This last graph depicts how people in Ferintosh feel about the Internet and its impact on their lives. None of those people interviewed think that the Internet has a positive impact on their relationships with people inside the community which could suggest that people prefer to communicate in different ways with other people from within Ferintosh. 82% of the people interviewed in Ferintosh felt that the Internet has improved their relationships with people outside of the community. 100% of respondents felt that the Internet has improved their access to information. The fact that so many respondents feel that the Internet has improved access to information may reflect people’s growing knowledge about navigating through the World Wide Web and an increased comfort level with this technology. Again, “How To” sessions held within the community may help even more people to learn about searching for the information they need and want, and becoming familiar with various advanced search engines, municipal, and national web sites can often help people to find what they are looking for.

Creating a community web site could further contribute to people’s positive feelings about online access as it provides a valuable source of local information. A site that includes details about local events, news, current issues, meetings, and fundraisers could help to provide community members with local knowledge. This type of access not only informs people, but also can bring people together from various parts of the community who may not normally have a chance to interact – certainly a benefit to social cohesion and community spirit.

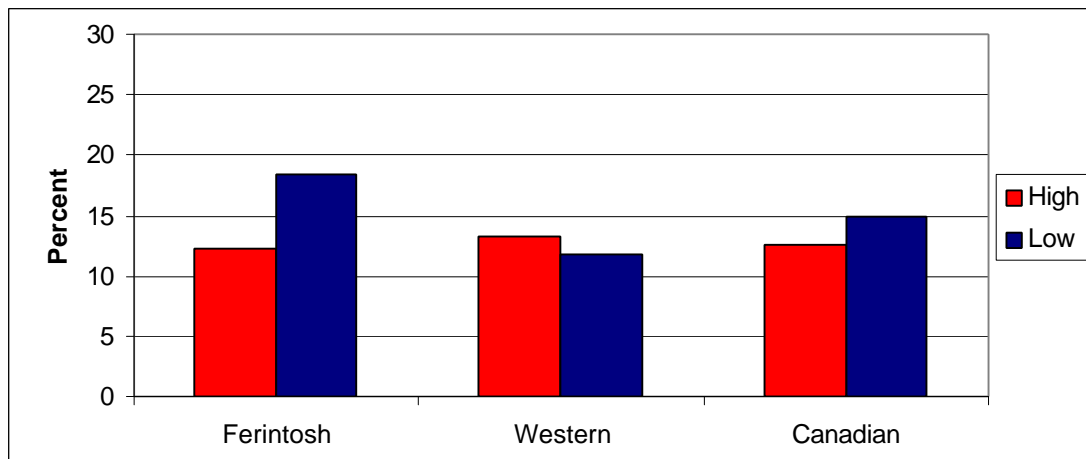

Personal Stress and Household Changes

Changes in personal circumstances, and the stresses that these cause, have a great effect on the residents of any community. In order to understand the changes in a community, and how it was dealt with by the residents, we asked a series of questions about the types of change seen in the last year, how they coped with the change, and whether life in the community was stressful or not. Examples of changes discussed included health, financial, legal, family relationship and child care.

Our survey found that 12% of residents in the community of Ferintosh described their lives as being very stressful. High levels of stress ranged from a low of 4% to a high of 21% across the six Western rural communities surveyed. The Canadian average indicated that 13% of the population described their lives as being very stressful across the 20 rural communities surveyed.

Furthermore, about 18% of respondents in Ferintosh indicated that they had no stress in their lives at all. This number is similar to the Western average and the Canadian average who reported no stress in their lives.

Examining the Levels of Personal Stress

The age of an individual also plays an important role in their level of personal stress. In general, our research across Canada indicated that stress levels tended to peak by middle age (35 to 49 years old) and then began to decline into the later stages of adulthood.

However, such is not the case in Ferintosh where high stress levels actually peaked (17%) among older adults (50 to 64 years old) and were at their lowest point (9%) among middle-aged adults (as indicated in the following graph). Furthermore, 1 in 10 seniors (65 years old and up) in Ferintosh indicated that they under a high degree of stress.

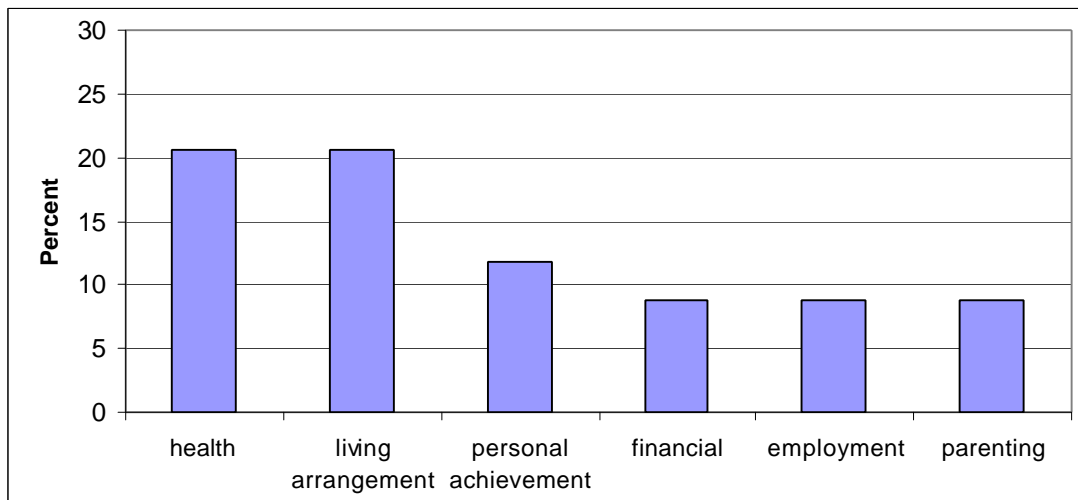

Examining High Levels of Stress Across Various Age Groups

Household Changes

Households experience many different types of changes throughout the course of a year and the impact of each of these changes varies from household to household and from one community to another. In the community of Ferintosh, 69% of households experienced at least one change over the past 12 months. Of these households, about 1 in 5 reported that a health change had the greatest impact on their household. That same number of households also indicated that a change in living arrangements had the greatest impact on their household over the past year.

Changes That Had the Greatest Impact on Households in Ferintosh

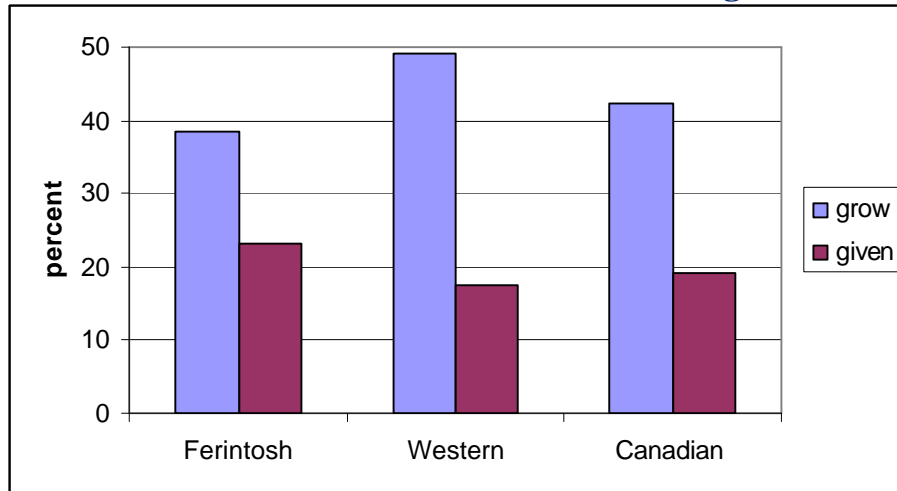

The fact that more than 20% of households in Ferintosh reported a health change as having the greatest impact on their household may have influenced the unusually high proportion of older adults (17%) and seniors (10%) who indicated that their lives were very stressful.

Doing Things For Ourselves And Others

In the section titled ‘Community Inclusion and Co-operation’ we measured social cohesion using resident’s views of the community they live in, and how that community works together. In this section we look at how residents in the community help one another with basic needs and services. This allows us to measure cohesion within the community on a practical level. Doing things for others contributes to a community not just by providing basic needs and services, but by possibly increasing communication and understanding between residents, which may lead to greater unity.

We looked at some basic household needs, such as wood, vegetables, fruit and game. We asked if residents grew or collected these themselves, and if they gave or received them from others. We also asked about basic skills and services that people within the communities shared. The reports on each community only include those basic needs that are relevant to that community.

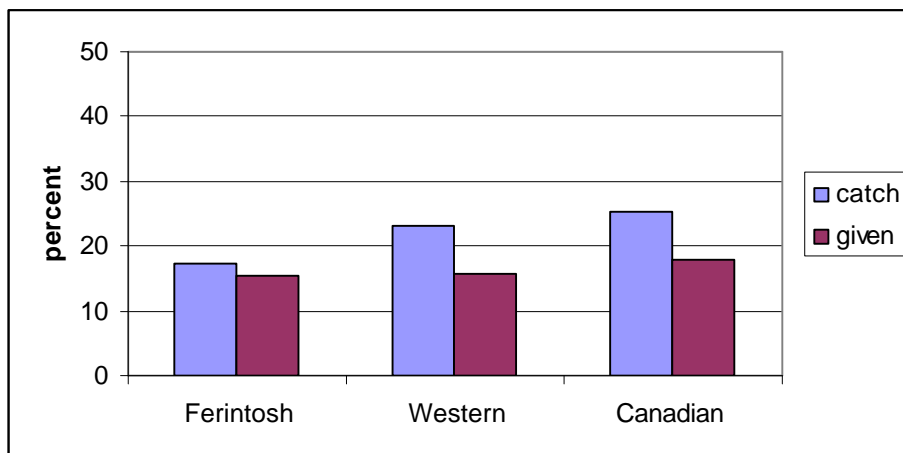

Households that Grow or are Given Vegetables

Land-based activities such as vegetable-growing and hunting are fairly common in Ferintosh. As is seen in the graph above, 38% of respondents grow their own vegetables, a figure not unlike the average for the Canadian sites but lower than the Western sites. Vegetable sharing is strong in Ferintosh. A total of 23% of respondents reported having been given vegetables from friends, neighbours or acquaintances. The growing and sharing of foods can be an important addition to more conventional economic activities especially during times of economic difficulty.

The following graph shows that 33% of respondents in Ferintosh eat wild game. Almost as many catch or hunt it themselves as receive it free-of-charge from others. Overall, levels of hunting are similar to regional and national averages.

Households that Hunt or are Given Wild Game

Households that Provide and Receive Skills and Services Free-of-Charge

As a means to measure self-reliance our survey also looked at a number of other activities such as carpentry, painting, and technical work. In the graph above you will see an index which combines several of these variables (specifically painting, sewing, housework, babysitting, repairs, technical help, snow removal and lawn care). The graph reports on the percentage of respondents who do these things themselves, receive them free-of-charge from others or provide them to others free-of-charge.

Here we see that a large number of people in Ferintosh, as in the Western and Canadian sites do these activities themselves. In Ferintosh, on average 65% of respondents take care of these tasks themselves and 24% do them for others. As shown in the graph above, these figures are similar to those of the other Western sites and slightly higher than the Canadian sites. The activities that respondents are most likely to do themselves are housework, transportation and babysitting. The ones respondents are most likely to pay cash for are technical services, automobile/boat repairs and painting.

The NRE in the global context

THE NRE RESEARCH SITES IN BRIEF

One of the older coastal communities in Newfoundland, the traditional fishing town of **WINTERTON** is nestled along Trinity Bay on the Northwestern side of the Avalon Peninsula. Winterton is home to approximately 600 people, many of whom are employed by the local fish plant and various service industries in the area. To celebrate its heritage and beauty, the town has established a boat-building museum, and most recently a spectacular board walk.

TWILLINGATE, an island community along the central North Coast of Newfoundland, is said to be the iceberg capital of the world. Home to about 3,000 people, Twillingate has traditionally been one of the most prominent fishing ports in Newfoundland. Although it has felt the effects of the cod moratorium, Twillingate continues to support a growing tourism industry and hosts the internationally acclaimed Fish, Fun and Folk festival every year in July.

Encompassing the communities of Belmont, Central Lot 16 and Southwest Lot 16, **LOT 16** is an unincorporated area located about 15 minutes northwest of Summerside, PEI. With a population of approximately 650 people, Lot 16 is known for its involvement in the agricultural sector as it is home to both dairy and potato farming. Residents of Lot 16 place high value on family and togetherness, with community groups such as the 4H Club, the Women's Institute and the Senior Citizen's Club gathering on a regular basis at local churches and the community hall.

SPRINGHILL, with an approximate population of 4,200 people, is located in the Northwestern part of Nova Scotia. Since the end of its traditional mining backbone, Springhill has been working hard to diversify itself in the areas of tourism, geothermal development and manufacturing. It is home to the Anne Murray Centre, the Miners' Museum and celebrates an annual Irish Festival filled with traditional dancing, music and other cultural events.

BLISSFIELD, an unincorporated parish of about 700 people, is located along the Miramichi River, next to Doaktown. Because it is surrounded by natural resources and spectacular scenery, Blissfield has relied on forestry, fishing and tourism to support the local economy. For six days in July 2000, Blissfield organized the Doaktown Fair and Reunion, a celebration which revived community spirit and encouraged community action.

NEGUAC, a highly bilingual community along the Southern end of New Brunswick's Acadian Peninsula, is home to about 1,700 people. Traditionally, residents of Néguaac have relied mainly on the forest and fishing industries for their livelihood, but as these resources become more unstable, the community has been seeking economic support in other areas such as manufacturing and tourism. Through the local Historical Society and events such as Rendez-Vous Néguaac, the community is able to promote its heritage.

The town of **ST. DAMASE** is located in the St. Lawrence valley, only 45 minutes east of Montréal. The population, currently at about 1,500, has been gradually increasing as St. Damase promotes a solid economic base in agriculture and food processing industries. With numerous social clubs and organizations, along with annual events such the Festival du Maïs, the people of St. Damase encourage togetherness and community spirit.

CAP-A-L'AIGLE is a picturesque little town located on the edge of the St. Lawrence river in Québec, with a population of about 710 people. The community's picturesque nature, tourism and recreation are the main drivers of the economy. However many members of the community work in neighbouring areas. One important event for Cap-à-L'aigle is the Fête des Lilas which includes 3 days of activities to bring the town together.

THE NRE RESEARCH SITES IN BRIEF

STE. FRANÇOISE is a charming community located south of Trois-Pistoles about fifty kilometers east of Rivière-du-Loup, in the region of the Lower Saint-Lawrence. The economic engine of this community of 467 people is its agro-forestry industry. There are also about ten commercial dairy farms in the area and many small farms that operate on a part-time basis. Each year, the Fête de Noël festival is celebrated by the residents of Ste. Françoise.

TASCHEREAU is a small town in Québec located in Central Abitibi between the communities of La Sarre and Amos. With a population of approximately 640, Tashereau has no shortage of water with 12 lakes and 7 rivers in the immediate area. With an entrance to the beautiful Aiguebelle Park, this town benefits from tourism. Forestry is also an extremely important industry as it employs almost 50% of the community.

Previously a township, **CARDEN**, Ontario has now amalgamated to be part of the City of Kawartha Lakes and is home to approximately 880 people year round. This number swells to over 1,300 in the summer as cottage season takes hold. While many people work outside of Carden, there's a growing aggregate industry here. The Carden Fair and the Alvar Plains are just some of the great reasons to visit.

USBORNE, previously its own township, is now part of the Municipality of South Huron, Huron County. It is located just north of London, Ontario and to the east of Lake Huron. With a population of about 1,500, Usborne's economy is rooted in the cash-crop and livestock industries; in fact, approximately 40% of the workforce is involved with farming. One of the major events which this town enjoys is the Kirkton Fair.

TWEED is a scenic Ontario town located just north of Belleville, between Toronto and Ottawa. It is home to approximately 1,600 people and acts as a service centre to the surrounding rural area. It has a mixed economic base of tourism, retirement functions, retail, and agricultural services. The Heritage Centre and renowned Flowerama Festival are two of Tweed's major attractions.

Located in Northeastern Ontario at the Southern tip of the Parry Sound District, **SEGUIN TOWNSHIP** is a recent amalgamation of several smaller communities. Its permanent population is about 3,400, but this number nearly quadruples as cottagers arrive each Summer. Tourism is one of Seguin's main industries and this beautiful area is not to be missed. Events like the Foley Fall Fair and the Winter Frolic bring the community together.

The Rural Municipality (RM) of **RHINELAND** is a cluster of communities, villages and farms in Southern Manitoba located along the border with North Dakota. The main communities of Altona, Plum Coulee and Gretna are small service centres and home to most of the 4,200 people living in the RM. The vibrant blue, yellow and gold fields in midsummer show Rhineland's strength in agriculture and annual festivals throughout the Summer draw tourists from around the province and the world.

The Municipality of **WOOD RIVER**, located in Southern Saskatchewan southeast of Moose Jaw, is home to about 980 people. Ranching and mixed farming are the main livelihoods in the municipality, and the town of Lafleche acts as the main service centre for the area. From their Crazy Canuk Days in the summer to the Curling Bonspiel in the winter, this community demonstrates a lively spirit year-round.

THE NRE RESEARCH SITES IN BRIEF

Home to approximately 280 people, **SPALDING** is located in Central Saskatchewan, northeast of Saskatoon. This small community acts as the service centre for the larger area of Spalding Rural Municipality. Historically rooted in agriculture, Spalding also has an innovative Geographical Information Systems business which connects truckers to farmers for grain transportation. The Fall Supper and Winterfest are just some of the events which bring community members together.

Home to 150 residents, **FERINTOSH** is located 125km southeast of Edmonton, Alberta. Ferintosh has proved to be a resilient community in the wake of many changes that occurred in the mid 1970's. It was able to adapt by bringing in outside industry (fibre optics terminals and public utility cooperatives) and by maintaining a strong volunteer base. The Church Suppers and the Snowmobile Rally help bring people together to express Ferintosh's community spirit.

HUSSAR, with a population of approximately 160, is located in Southern Alberta about 100km east of Calgary. Its economy is based in agriculture, oil and gas, and Hussar's adjacency to Calgary has also been an influence. The town recently raised money and built a new arena and sports complex. Hussar also celebrates community pride and spirit through such events as the Curling Bonspiel and the Summerdaze Rodeo.

TUMBLER RIDGE, incorporated in 1981, is located in the Eastern foothills of the Rocky Mountains in Northern BC. With an approximate population of 3,000, the town has relied mostly on coal mining but is working hard to diversify to include forestry, oil and gas, and tourism through newly established provincial parks and protected areas. Every August, the annual Grizzly Valley Days is held to promote community togetherness through family activities, sports, and games.

With a population of about 6,000, **MACKENZIE** is located in North Central British Columbia. Its economic base is grounded in forestry and it started out as an "instant town", planned and developed by a forestry company to be a regional processing centre. The annual Alexander Mackenzie Days is just one event which helps to bring Mackenzie's families closer, with entertainment, crafts, and games.

★ NRE Sites Across Canada

Understanding the New Rural Economy: Options and Choices

a project of
The Canadian Rural Revitalization Foundation
May, 2002

The New Rural Economy Project (NRE) is a five-year research and education program underway in rural Canada. It is a collaborative undertaking bringing together rural people, policy-analysts, researchers, the business community, and government agencies at all levels to identify and address vital rural issues. It is conducted at the national level with historical and statistical data analysis, and at the local level with case studies involving community and household surveys.

The project will produce:

- **learning forums** to discuss and debate opportunities, options, and choices that include the interests of all rural Canadians and stakeholders;
- documented **recommendations** for long run rural business performance, inclusive development, and public policy; and
- **informed questions** on new issues, unimaginable in the present, but requiring timely answers for the future.

The project is conducted within the framework of 5 social cohesion themes:

- **economy**
- **service**
- **capacity**
- **communication**
- **governance**

Since its inauguration in May, 1997 the project has held 10 national workshops and conferences, prepared a number of major reports, established a Centre for Rural Data, profiled 32 carefully selected rural sites for research and education activities, and organized a network of 33 partners, 22 researchers, 19 universities, and 18 government departments across Canada. Through its connection with the Canadian Rural Revitalization Foundation (CRRF), the NRE project has involved over 100 partners and created a research and education network of international stature. Representation from Canada is complemented by colleagues from Europe, Mexico, and Japan.

For further information see the CRRF Web site: www.crrf.ca, the NRE Web page: nre.concordia.ca or contact:

Understanding the New Rural Economy: Options and Choices

SUMMARY OF ACCOMPLISHMENTS

May, 2002

Research Products

1. **Sampling Frame** designed and **32 Sites Identified** on 5 critical dimensions
2. Data Centre expanded with site profiles, reports, photo gallery and other research tools
3. *Site Profiles* prepared for 25 field sites
4. Household Survey database, summer 2001
5. *Rural Canada Database* developed (1986, 1991, 1996)
6. Report: **A Preliminary History of Rural Development Policy and Programmes in Canada, 1945-1995**
7. Report: **Analysis of Leading and Lagging Census Sub-Divisions in Rural Canada**
8. Report: **Economic Integration and Isolation of First Nations Communities: An Exploratory Review**
9. Report: **Access to Federal Government Services in Rural Canada: Field Site Findings**
10. Report: **Predictability and Trapping: Under Conditions of Globalization of Agricultural Trade**
11. Report: **Review of the Literature Relating to the Role and Impact of Government Involvement in Rural Canada**
12. Report: **Dynamics of the New Rural Economy: An Exploration of Community-Sponsored Research from Huron County** (edited by Tony Fuller and Paul Nichol, 1999) Guelph: University of Guelph
